

Speed against accuracy: down and to the left is better on both

Target A: elliptical Laplace

state dependent J_s , $s = 2$: never converges

state dependent J_s , $s = 5$: never converges

constant J_a

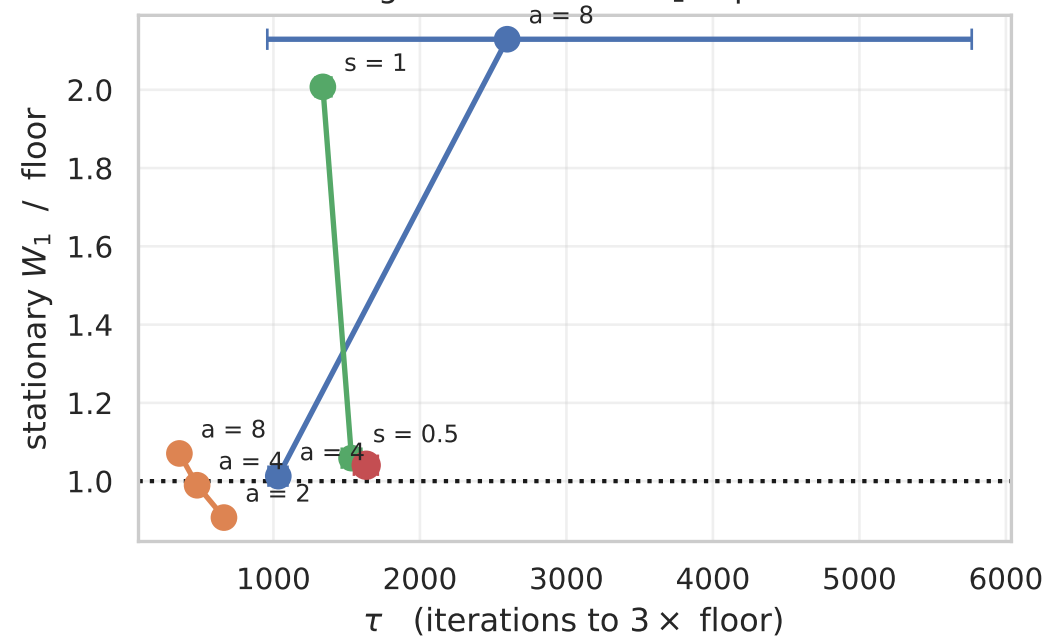

constant J_a aligned

state dependent J_s

$J = 0$

..... sampling floor

Target B: correlated ℓ_1 Laplace

state dependent J_s , $s = 2$: never converges

state dependent J_s , $s = 5$: never converges

constant J_a

constant J_a aligned

state dependent J_s

$J = 0$

..... sampling floor
