

Speed against accuracy: down and to the left is better on both

Target A: elliptical Laplace

Target B: correlated ℓ_1 Laplace

state dependent J_s , $s = 2$: never converges

constant J_a

state dependent J_s

state dependent J_s , $s = 2$: never converges

constant J_a

state dependent J_s

..... sampling floor

constant J_a aligned

$J = 0$

..... sampling floor

constant J_a aligned

$J = 0$
