

Titanic: J_a at $a = 3$ and $J_s(x)$ at $s = [2.0, 7.0, 2.0]$, the strengths the constrained study used. Bands are ± 1 s.d. over walkers; the bottom row is the same data on a log axis, where a curve that is lower is closer to the posterior.

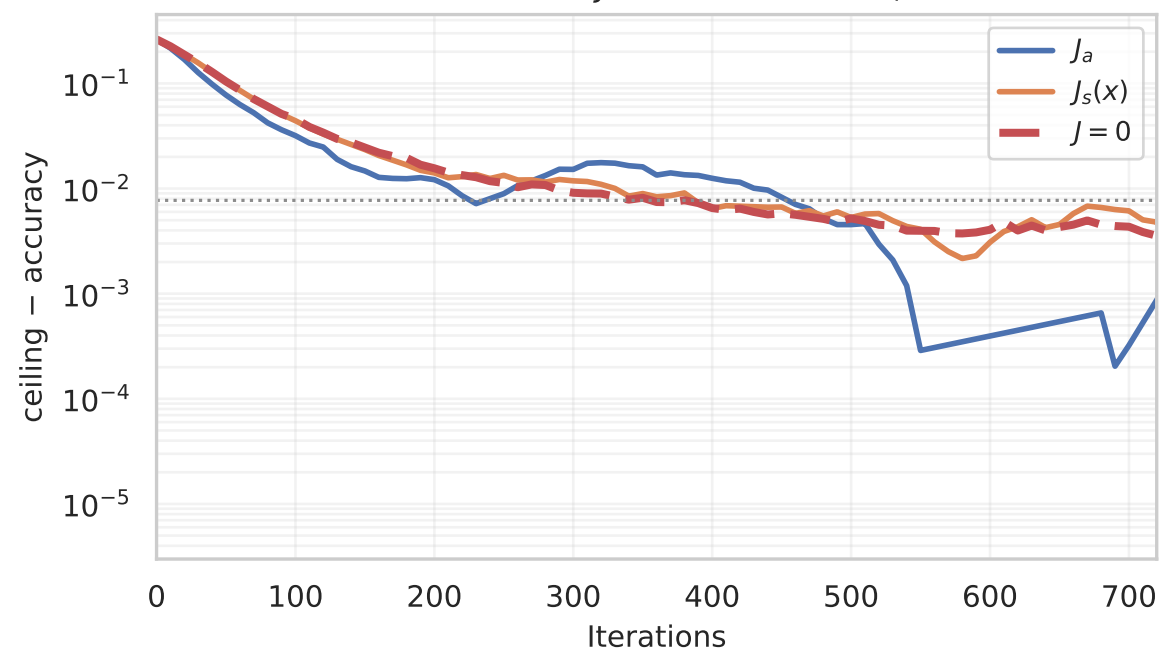

Titanic: accuracy over the training set

Titanic: accuracy over the test set

the transient, on a log axis (window ends at twice the iteration $J = 0$ needs to arrive)

the transient, on a log axis (window ends at twice the iteration $J = 0$ needs to arrive)
