

lambda_lasso = 100 — L1-smooth ball

Training accuracy (n = 1600)

Test accuracy (n = 400)

d = 9 (intercept + 8 slopes); constraint: L1-smooth ball, threshold 3.7; lambda_lasso = 100 with anchor delta = 0.02, so a(w) in [0.0000, 1];

EXACT gradient; eta = 0.0001; R = 100; iterations = 1000; block strengths s = (3.0, 3.0, 3.0); alpha = 0 vs 1.

Lines are the across-replicate mean; bands are mean +/- 1 sample sd (ddof = 1) of single-iterate accuracy -- repeat-run variability, NOT confidence or credible intervals. Axis windowed on the plateau, not [0, 1].
